

484mm

A technical drawing of a horizontal beam. The beam is represented by two parallel horizontal lines. At each end, there is a vertical line segment extending slightly beyond the main beam lines, representing a support or end cap. Below the beam, there is a rectangular block representing a support. Two short vertical lines connect the top of this block to the bottom of the beam, indicating the support points. Above the beam, a dimension line with vertical end caps is labeled '484mm'. To the right of the beam, a dimension line with horizontal end caps is labeled '97mm'.
